# PeopleOps HR Pipeline: CFO briefing

## Question: why does overtime cost keep rising?

- 6 months of HCM data, 12 files, 345,280 punches, 5,372 leave requests
- Pipeline: raw -> staging -> star schema -> 10 answers -> 78 data checks
- All numbers reproduced by one command and cross-checked from raw files

## Three findings

- 1. Unsupported overtime approvals in Stitching: about 960k PKR
- 2. Six employees paid with zero attendance: 2.88M PKR gross
- 3. Five separated employees still paid: 1.95M PKR

*Indus Weave Textiles is fictional; all data is synthetic.*

# Overtime: paid hours grew, punched hours did not

## Paid OT hours: April 5,526 -> September 6,418 (+892 h)

- Punched (computed) OT: 6,066 to 6,472 h per month, no upward trend
- Stitching alone rose by 1,017 h (761 -> 1,779): more than the whole increase

## Stitching paid OT is 56% above punched OT

- Other departments: 7% to 16% below punched OT
- Evidence: Q5 and Q6

*Source: analytics/results/q05_overtime_three_way.csv, q06_paid_vs_computed_overtime.csv*

# Finding 1: approvals that the punches do not support

## 644 approved requests, 151 employees, 1,947.5 hours

- Employee was present but worked no overtime after shift end (622 days), or was absent (22 days)
- All 644 approved by one person: E10382, Assistant Manager, Stitching
- Unsupported hours per month: 49 (Apr) -> 662 (Sep)

## Action

- Freeze payment of unsupported approvals; second approver above a threshold; reconcile approvals to punches be

*Estimated cost at 492.75 PKR/hour: about 960,000 PKR*

# Finding 2: six employees paid with no attendance

**E10399, E11064, E10491, E11089, E10907, E10564**

- No biometric device mapping: zero punches in six months
- Recorded Absent on 884 days in total, about 147 each
- Received 2,877,075 PKR gross; no absence deduction (1,180 other employees have one)

**Action**

- Verify identity, bank account and manager sign-off; hold payment until verified; make enrolment a condition of activ

*Evidence: Q7; device_mapping.csv has no row for these employees*

# Finding 3: pay continues after separation

## Five employees, 21 payslips, 1,948,000 PKR gross

- Payments continue through September 2026
- Cross-checked against raw payroll and employee files: same result

## Action

- Stop payments now and recover overpayments
- Payroll control: block any payslip dated after the separation month

*Evidence: Q8*

# Data trust: what was fixed and how we know

- SITE Plant device clock ran +60 min from 1 July: found by comparing check-ins to shift start; corrected
- 50 duplicate employees, 16,175 duplicate punches, 6,962 unmapped punches: all rejected with reasons
- 39 wrong effective-to dates recomputed from the next record (business rule 2)
- raw = staging + rejected for every table; 77 of 78 checks PASS, 1 documented WARN
- Headline answers match an independent pandas recount from the raw files

## Limits

- 20 punches after separation fall outside attendance (documented). SQLite used instead of PostgreSQL.
